

ABOUT

- The Super Rod Flexi Drill Kit includes everything you need for drilling and pulling cables through joists behind walls and ceilings.
- At 1,370mm, the flexi drill bit reaches through multiple joists from a single access point. Fewer holes, saving time and effort.
- Holes at both the head and tail of the bit connect directly to cable or the swivel pulling grip. Drill the hole and pull the cable back through in one operation.
- The cushion grip folding placement tool guides the bit as you drill, keeping it on track through the cavity for a cleaner, more accurate result.
- The screw point tip cuts a clean 14mm hole and pulls effortlessly through wood.
- Three flat non-slip faces on the 4.76mm chuck end grip firmly in the drill chuck, preventing slippage and maintaining consistent power transfer during operation.
- High-grade spring steel bends smoothly to navigate wall cavities, under floorboards and above ceiling voids.

PRODUCT WARNING DISCLAIMER

- For use by competent and qualified individuals only. Improper use may cause serious injury.
- Before drilling, locate all concealed wiring, plumbing, gas pipes, and utilities. Always comply with current building regulations and electrical codes.
- Flexible bits may bind or deflect, causing sudden torque reaction. Use a drill with a side handle and maintain firm control using two hands.
- Do not bend the bit at too tight an angle during use as over bending can cause the bit to snap.
- Inspect bit before use. Do not use if damaged, bent, or worn.
- Always wear appropriate eye protection.
- Manufacturer assumes no liability for misuse, improper installation, or failure to comply with applicable regulations and safety standards.
